About This Device

Page 17 of 19

Maple Street

Real Estate

The phone that produced this document was asked to describe itself. Its answer is below.

Signing hardware	Isolated secure processor
Bootloader	Locked
Device software	Manufacturer-signed, unmodified
Device reported by hardware	BLU G45
Android version	15.0.0
Security patch	2026-03
Bound to record hash	d211157ec4820661e8408b74ee057abbde66182d418bf91ef466a8dab289fc46
Attestation certificate	68b07e5126262b26ecc31f9fb0065b94aa63bf7c69ee62f13dbc35e350a03585

The statements above are made by this phone's security hardware and signed by a certificate chain issued by Google. They describe the phone that produced this document and the state its software was in. They say nothing about whether the communications themselves are accurate or complete.

How To Read The Hashes

Page 18 of 19

Maple Street

Real Estate

Every record in this document carries two fingerprints and a result. This page explains what each one means, and what it does not.

SHA-256

A fingerprint of a piece of data. Any change to it, however small, produces a completely different fingerprint.

Ingestion record hash

The fingerprint taken when this record was first read from the device.

Current record hash

The fingerprint taken again when this document was produced.

Verification: MATCH

The two fingerprints agree. The record is unchanged since it was first read.

Verification: MISMATCH

The two fingerprints differ. The record changed after it was first read. It is still shown here, and this label is how you know.

Verification: SOURCE MISMATCH

The copy still on the device no longer matches what was first read from it.

Verification: ingestion unpinned

No first-read fingerprint was stored for this record, so no comparison can be made.

What this shows

Whether a record changed after this app first read it. It does not establish that the original was accurate, who wrote it, or that nothing is missing.

Chain Of Custody

Page 19 of 19

Maple Street

Real Estate

Verification Summary

LOCAL RECORD

Export generated locally with record hashes and embedded-file checksums.

Export ID CL-20260818-MSZA8XHI

CHAIN OF CUSTODY

- 01 This record was generated on-device by CommLocker from device-native communication data available to the app.
- 02 Message content, call records, voicemail records, attachments, and record hashes are processed locally.
- 03 Hashes verify that included items are unaltered since first observation by CommLocker; this record makes no claim of completeness.
- 04 Notes are labeled separately and do not alter original communication content.
- 05 The scope label on the cover controls whether this export is a tagged record, single conversation export, or complete archive.
- 06 The attachment index lists versioned attachment record hashes. Each embedded file also carries the raw SHA-256 of its exact bytes in its PDF file metadata.

EXPORT HASH

SHA-256 digest for the generated communication record.

d211157ec4820661e8408b74ee057abbde66182d418bf91ef466a8dab289fc46
